Art Unit: 1774

1. Claims 9,10, 12 and 13 remain withdrawn from consideration.
2. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ogawa et al. (5,576,088) for reasons of record and further in view of Pope (4,722,868). Ogawa et al. disclose that the support may be a sheet of fibers of a synthetic resin such as polyethylene, polypropylene, polyester or others (see col. 6, lines 27-38). Applicants' claim 1 recites use of a specific polyester as one of the materials for its substrate.

Pope teaches that it is known in the ink jet recording art to make sheets or films, which may be paper or cloth, of linear polyester. The polyester may be formed from terephthalic acid, ethylene glycol and 1,4-cyclohexane-dimethanol. See col. 1, lines 5-10 and col. 5, lines 5-31). Based upon the disclosure of Ogawa et al. to the use of polyester and the specific teaching of Pope that it is known to use linear polyesters formed from terephthalic acid, ethylene glycol and 1,4-cyclohexane-dimethanol in synthetic sheets, including cloth as a support material for an ink jet recording sheet, it would have been obvious to one of ordinary skill in the art to use the well known polyester of Pope as the polyester support of the primary reference.

3. Applicant's arguments of July 28, 2003 with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection. However, the rejection over Fujita et al. has been overcome by applicants' arguments concerning fusing of the coating to the support.
4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Art Unit: 1774
